

Muhammad Ahmad Mehmood

AI Engineer • Agentic AI & LLM Systems • Workflow Automation

+92 300 1006181 | ahmad.shahid.ds@gmail.com | [LinkedIn](#) | [GitHub: ahmee20](#)

PROFESSIONAL SUMMARY

AI Engineer specializing in agentic systems, LLM integration, and production workflow automation. Experienced in building end-to-end solutions, voice agents, multi-agent pipelines and API-connected workflows, using Python, LangGraph, LangChain, FastAPI, and n8n. Comfortable taking projects from architecture through deployment, with additional depth in ML/DL, NLP, and computer vision. Dean's List graduate in Data Science from FAST-NUCES, Islamabad.

TECHNICAL SKILLS

Agentic AI & LLMs: LangGraph, LangChain, MCP, RAG/Embeddings, Prompt Engineering Tool Calling, Evaluation & Reliability
AI Automation & Integration: Workflow Automation, Error Handling REST API Integration, n8n, Google Workspace
ML, CV & Data: Machine Learning, Deep Learning, NLP, Computer Vision
Programming & Backend: Python, FastAPI, Flask, PostgreSQL, Vector DBs, ChromaDB, Supabase
Tools & Practices: Git/GitHub, OpenAI, Antigravity, Copilot, Claude, Codex, Tableau, Stakeholder Collaboration, Problem solving

PROFESSIONAL EXPERIENCE

Tashi Technologies Corp (Pvt) Ltd.

June 2025 – Mar 2026

AI Automation Engineer

- Architected and deployed agentic AI workflows integrating LLMs, voice agents, social media (Meta, X, etc), and multiple third-party APIs to automate end-to-end business processes, owning engineering standards from requirements gathering to production deployment.

AJCL (Private) Limited

July 2025 – June 2026

Final-Year Industry Project

- Built an AI video content-moderation platform using NLP, computer vision, and speech-to-text to detect offensive language and hate speech (**81% accuracy**), with real-time logging and dashboards to monitor moderation events and team productivity.

Genesys Research Lab

Jun 2025 – Jul 2025

Computer Vision Research Assistant, Intern

- Worked on a CPEC-associated infrastructure monitoring pipeline using LiDAR data and YOLO-based defect detection. Integrated GPS coordinates to visualize detected defects on maps for geospatial monitoring.

FAST-NUCES, Islamabad

Aug 2025 – Dec 2025

Lab Demonstrator, Operating Systems

- Mentored **30+ students** across OS lab sessions, demonstrating core concepts and guiding hands-on exercises.

KEY PROJECTS

FYP, SentraQ – NLP, Computer Vision, Speech-to-Text, ETL

- Built an intelligent moderation platform using **NLP, CV, Fine-tuned transformers and speech-to-text models** to detect offensive language and hate speech in video content.
- Developed activity logging and interactive dashboards for real-time moderation monitoring, achieving **81% accuracy** while improving efficiency through automated analysis and actionable analytics.
- Engineered an automated **ETL pipeline** to ingest video assets, convert audio to text, run model inference, and store results in a database.

AI Receptionist Calling Agent [\[Demo Video\]](#) – Python, JavaScript VAPI, Twilio, Webhooks, n8n

- Engineered an AI voice receptionist for end-to-end appointment scheduling using n8n, integrating **6 platforms** (ElevenLabs, Calendar, Sheets, Gmail, VAPI, Twilio) through webhooks.
- Automated calendar events, database updates, and email confirmations with real-time availability tracking to create a **100% automated** system.

Voxyl Screener – Python, FastAPI, React, Tailwind CSS

- Built an automated system that scrapes jobs, tailors resumes, writes cover letters, and suggests changes to improve resume.
- Integrated **Apify, Apollo, GCP, PDF.co, Groq, Alchemy, PostgreSQL, Supabase, and LangSmith** into the end-to-end workflow.
- Cut per-application work from **10–15 minutes** to generating up to **12 tailored resumes and cover letters** in approximately **3 minutes**.

AI-Powered Personalized Storybook Generator – JavaScript, OpenAI, Face++, Cloudinary, PDF.co, Google vision

- Built an AI children's book generator producing **16 illustrated scenes** per request for personalized storytelling.
- Used vision APIs to extract **10+ visual attributes** into structured prompts for consistent scene and character generation.

Agentic Dependency Security Auditor – Python, LangGraph, LangSmith, Pydantic, PyPI, Tavily

- Built an agentic Python workflow that reuses approved tools or generates new ones from natural-language tasks.
- Implemented deterministic dependency auditing with **LangSmith tracing, PyPI, OSV, web search**, and a local tool registry.

EDUCATION

FAST-NUCES, Islamabad

2022 – 2026

BS Data Science

Relevant Coursework: Agentic AI, Deep Learning, Big Data Analytics, Digital Image Processing, Generative AI

CERTIFICATIONS & ACHIEVEMENTS

- Dean's List**, FAST-NUCES (academic excellence)
- Agentic AI with LangChain and LangGraph (IBM)
- Machine Learning with Scikit-Learn (LinkedIn)
- Data Analytics with Python – Simplilearn (Coursera)
